

About

Hi, I am Himanshu Sheoran (alias deuterium), I am currently a Security and Privacy Engineer at Google. I used to be an RnD engineer at VMware CarbonBlack. I have completed my Bachelor's Of Technology in Computer Science and Engineering with majors and a crush on cybersecurity.

I have been playing a lot of CTFs (<https://deut-erium.github.io/ctf-tutorials/2021/04/04/What-Are-CTFs.html>), nowadays with [Project Sekai](https://ctftime.org/team/169557) (<https://ctftime.org/team/169557>) and [zh3r0](https://ctftime.org/team/116018) (<https://ctftime.org/team/116018>) where I can be found doing crypto tasks. My areas of interests include Cryptography, Reverse Engineering, Binary Exploitation, SMT/SAT solvers and programming in general.

In case you find some deuterium with a profile picture, with the same love for escher, [fractals](https://deut-erium.github.io/pyfractal/) (<https://deut-erium.github.io/pyfractal/>) and metal, its probably me.

This personal blog is aimed towards documenting my interests, research and interesting finds.
