

Challenge archive: zh3r0 CTF V2 2021 - import numpy as MT

deuterium — Event date: 2021-06-04

Challenge event began 2021-06-04; article publication date not recorded.

Canonical HTML: <https://deut-erium.github.io/challenges/zh3r0-2021/import-numpy-as-mt/>

Abstract

zh3r0 CTF 2021 - Cryptography.

By deuterium.

Original description

Python is so slow! Lets use nUmPy tO MAkE iT FaSTer. Only if there was a module for crypto in it :(

Read this challenge as plain text or JSON.

Files

- challenge.py
- Fixed instance (output.txt)

This is the original two-layer encryption challenge. The Wiki Mersenne practice variant uses one layer and has a different flag.

This fixed output was generated for the post with the unchanged original program and event flag. It is not a recording from the competition.

Try the local practice variant. Its flag check is separate from this event challenge.

Download

```
mkdir -p zh3r0-2021-import-numpy-as-mt
